

## **POLINI ECM FOR PIAGGIO VESPA-LIBERTY 50 4STR. EURO 4: POLINI ALL IN ONE**

For all the enthusiasts of the most famous scooter in the world, Polini presents the new ECM "ENGINE CONTROL MODULE" for Piaggio 50 4str. Euro 4 engine.

It's a Polini electronic CDI that controls the engine. It includes the connected sensor, the actuators, fuel injection, ignition and engine auxiliary components.

Polini ECM lets the vehicle performance increase through the use of microprocessors of last generation, in synergy with a hardware that has been projected especially for this engine.

It's a plug & play CDI. Very easy and fast to install, it's enough to disconnect the original one and connect the Polini ECM.

ECM is ready to be installed on the original scooter. In this case we recommend matching it with the Polini Hi-Speed variator.

If you want to increase the power of your scooter with the Polini cylinder kit, it is possible to update the ECM by uploading the map available on the Polini Motori official web site.

Polini ECM application:

VESPA - VESPA 50 4T PRIMAVERA 3V iGET E4
